

BC STBBI treatment provider list

Referrals for follow-up and treatment of people with an HIV or HCV diagnosis who have been released from provincial custody can be sent directly to these providers in the community.

Referrals can be sent by faxing a letter with most recent lab results results attached. The clinics are able to provide telehealth consults and can begin seeing patients before release from custody, to begin treatment work-up prior to return to the community, or connect with them in the community after release.

If client has not yet been informed about their test result, this should be indicated when the referral is sent, in order for the community provider to provide results and post test counselling appropriately.

NOTE: Additional clinics providing HCV treatment in BC can be located if required through the BCCDC hep C clinics map (link at bottom of page) if clients prefer to chose a different provider.
